Rare Diseases and Conditions

Technologies Available for Licensing from NIH/FDA and Non-Profit Institutions

Technologies related to rare diseases or conditions available for commercial licensing are listed under the related disease or condition. You can search disease names alphabetically or by specific name. Note that, at present, there may not be a listed invention for every disease or condition. Please continue to revisit the site as it will be updated periodically. The diseases and conditions on the site are those designated as such by the NIH Office of Rare Diseases and are defined as having a prevalence of fewer than 200,000 affected individuals in the US. For background information on a specific disease or condition, please visit the [NIH Office of Rare Diseases Website](#) or click on the [\[Define\]](#) button next to the disease name.

If you are a non-profit institution and would like to have your technology included in this list, please [Click Here](#).

Preeclampsia

Determination of AM-Binding Proteins and the Association of Adrenomedullin (AM) Therewith

The present invention provides methods for the isolation, identification, and purification of adrenomedullin (AM)- binding proteins. Methods for utilizing the purified AM-binding proteins, or functional portions thereof, to diagnose, treat, and monitor AM-related diseases are described. A second aspect of this technology discloses the identification and isolation of a novel complex between AM and a specific AM-binding protein 1 (AMBP-1), design... [More ...](#)

The Many Roles Of Adrenomedullin In Human Pathology And Physiology

Adrenomedullin (AM) is an a-amidated 52-amino acid peptide that shows slight similarity to calcitonin gene-related peptide (CGRP). The effects of AM and its fragments in the cardiovascular system have been widely studied. Endothelial cells secrete the peptide that acts on specific receptors present in the vascular smooth muscle cells and other contractile cells. Some diuretic functions have been also described. In the respiratory system, two majo... [More ...](#)

Method Evolved for Recognition of Thrombophilia (MERT): Clinical Predictive Genetic Test for Venous Thrombosis

Venous thrombosis (VT) is one of the leading causes of mortality and morbidity resulting in approximately 300,000 hospitalizations and 50,000 fatalities per year in the United States with an incidence of 141 per 100,000 African-Americans, 104 per 100,000 Caucasians and 21 per 100,000 Asian/Pacific Islanders. However, it is an avoidable disease if effective preventive measures such as early thromboprophylaxis are instituted.

Non-Confidential Description

DIAGNOSTIC IMMUNOASSAY FOR HYPERTENSION, ARDS, CARDIOVASCULAR DISEASE, AND LIPID DISORDERS

Polyunsaturated fatty acids are important precursors for many regulatory lipids, including lipids involved in the regulation of blood pressure and lipid metabolism. Thus, they are implicated in a number of important disorders such as hypertension, eclampsia, ARDS, cardiovascular disease, and disorders in lipid metabolism. Some of these disorders, like pre-eclampsia, eclampsia, and pregnancy-induced hypertension (PIH) are potentially severe complications in human gestation. Full-blown eclampsia, though rare, has very

Neglected Diseases

SCIENCE. IDEAS. BREAKTHROUGHS.

Neglected Diseases

Technologies Available for Licensing from NIH/FDA and Non-Profit Institutions

Global health organizations define neglected diseases as those that are prevalent among impoverished and marginalized populations in the developing world. Tropical environments, poor conditions, and limited access to health care contribute to the risk and spread of these diseases.

Technologies related to neglected diseases available for commercial licensing can be viewed by clicking on the disease of interest. The list is a compilation of diseases recognized as neglected by the World Health Organization. Note that, at present, there may not be a listed invention for every disease. Please continue to revisit the site as it will be updated periodically. For additional information on a specific disease, click on the [Define] link.

If you are a non-profit institution and would like to have your technology included in this list, please [Click Here](#).
